Riverina

Size (km^2) 77 980 Elevation (m) 66-540 Sth latitude -35.67

Time period	Mean Jan temp (MJT)	Annual* rainfall	GSR	Oct-April GDD
1961-1990 average	24.6 ºC	426 mm	240 mm	2327
2006-2025 average	26.6 ºC	420 mm	259 mm	2545
2025-26 season*	28.7 ºC	314 mm	161 mm	2643

**July 2025-June 2026*

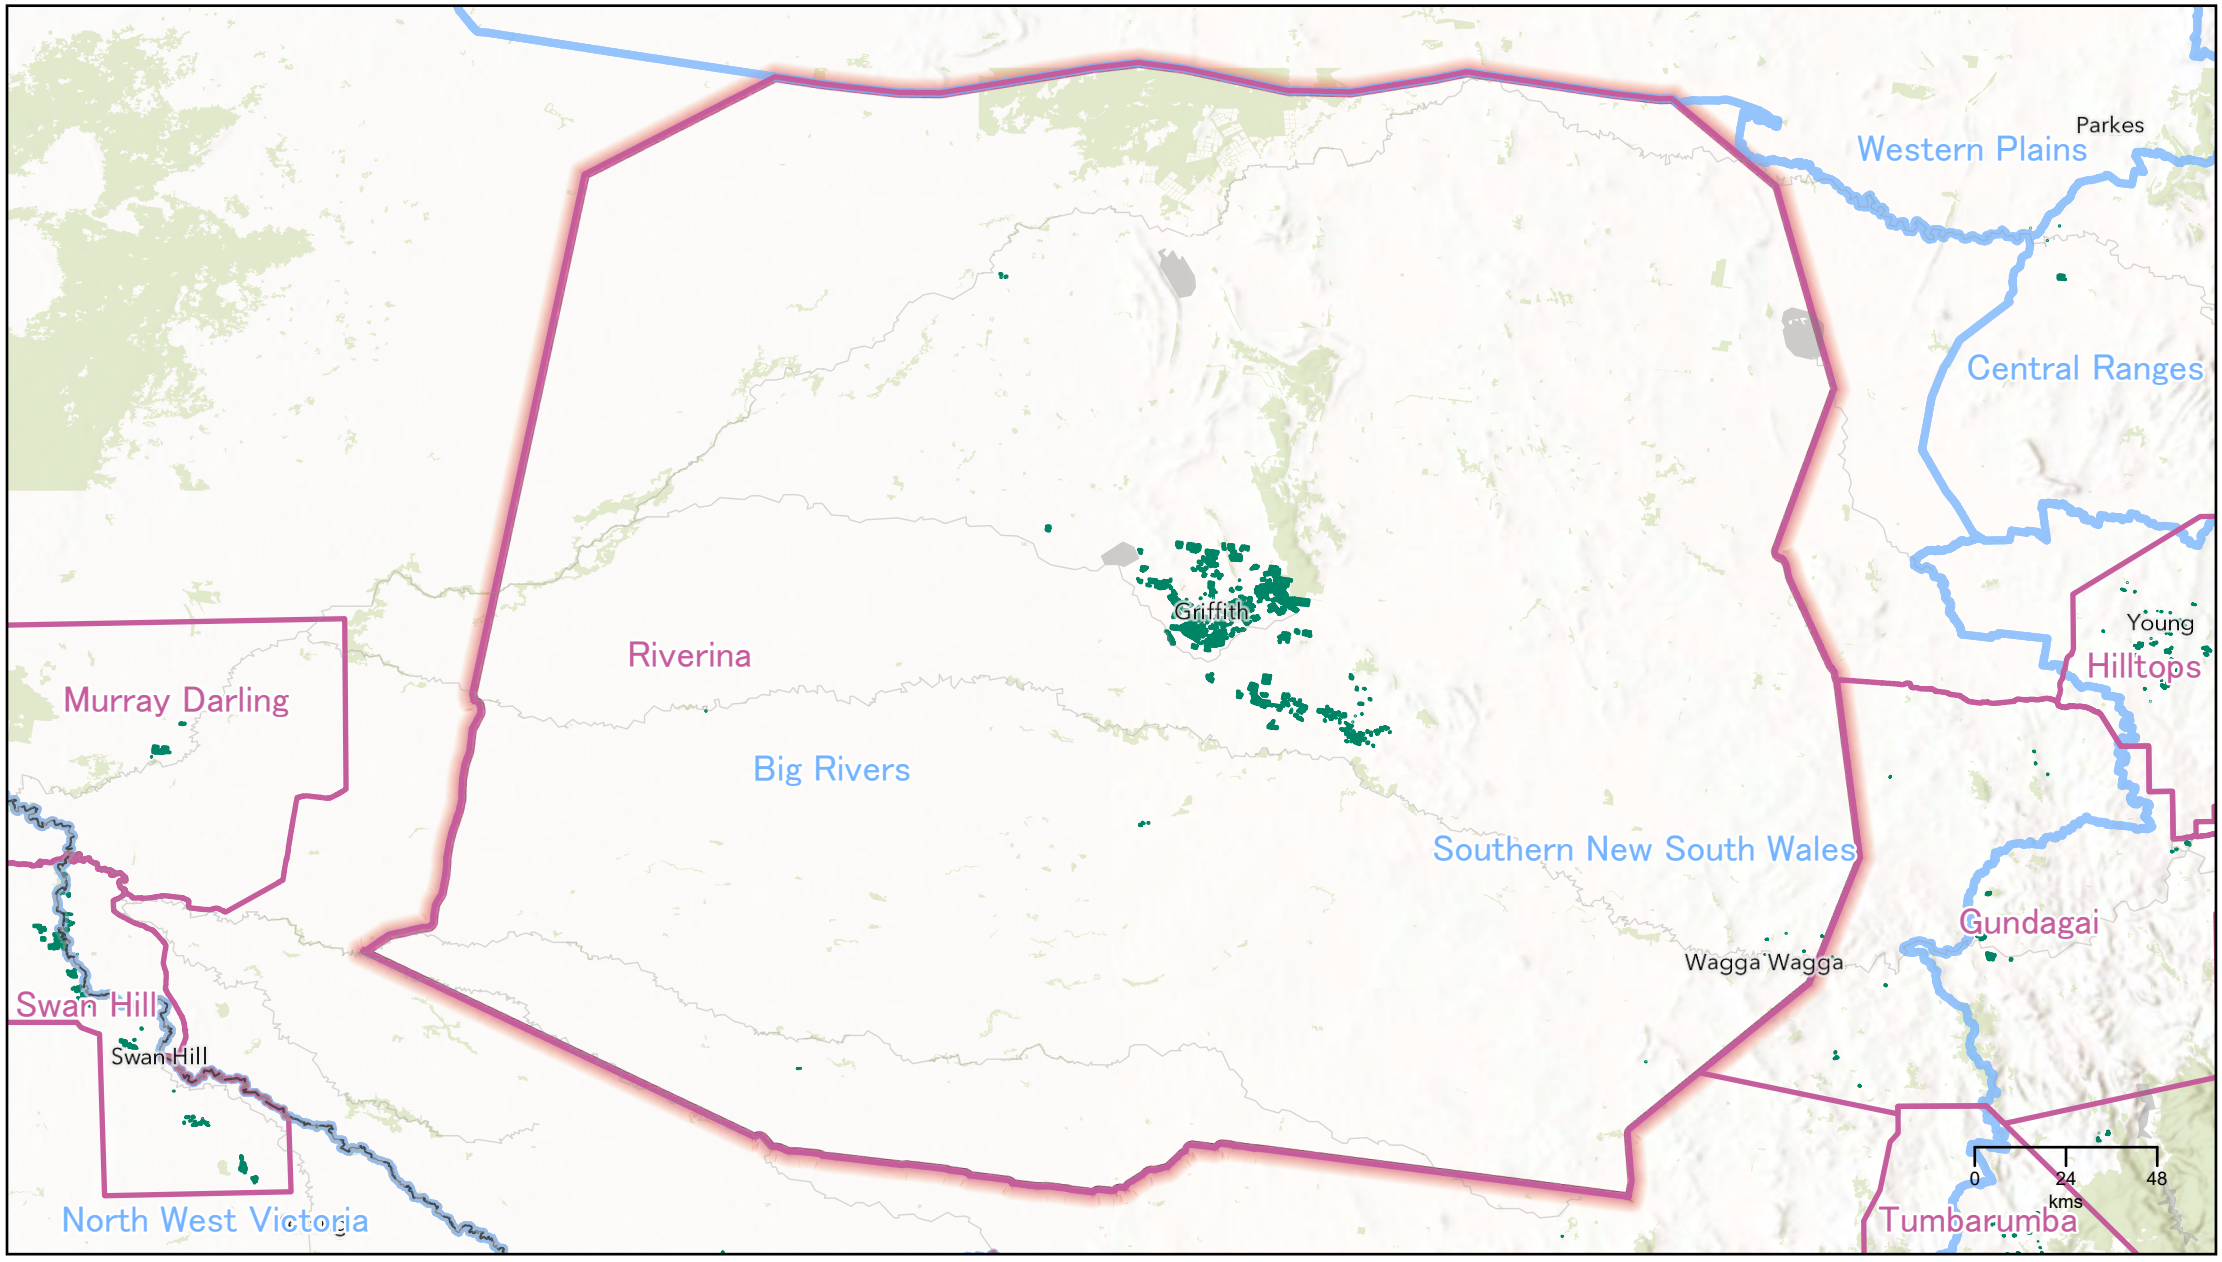

Notes

Meteorological data is taken from the national climate databank of the Bureau of Meteorology: the Australian Data Archive for Meteorology (ADAM).
Climate indices have been calculated across the whole GI region by the Antarctic Climate Ecosystem CRC as part of a research project co-funded by Wine Australia.
Growing season rainfall (GSR) and growing degree days (GDD) are both calculated from October to April across the whole GI region. GSR and GDD for individual vineyards will vary from this value.
Latitude data is the centroid of each GI region. Altitude/elevation data is the highest and lowest point in the region - regardless of whether there is a vineyard at that location.
Area data comes from the National Vineyard Scan 2020 conducted by GAIA on behalf of Wine Australia. Variety share from ABS vineyard survey 2015.
Estimated crush figures are higher than the figures reported in the National Vintage Report as the estimated figure is raised to allow for the non-response rate.
Exports by GI content includes all wine that has been identified by the exporter as coming from the GI, but not necessarily claimed on the label.
Label claim exports are those where the GI region is identified on the label. GI region content is based on the region reported by the winery in the product description.
